; Patent No. 642867
; GERREAL INFORMATION:
APPLICANT: Herz, Joachim
; APPLICANT: Getthardt, Michael
; TITLE OF INVENTION: LDL Receptor Signaling Pathways
; TITLE REFERENCE: UTSW0708
; CURRENT FILING DATE: 2000-05-01
; NUMBER OF SEQ ID NOS: 132
; SOFTWARE: Patentin Ver. 2.1
; SEQ ID NO 43
NAME: Ariniello, Pamela Deneke
REGISTRATION NUMBER: 40,489
REFERENCE/DOCKET NUMBER: GTC-012
TELECOMMUNICATION INFORMATION:
TELEPHONE: (781)893-8277
INFORMATION FOR SEQ ID NO: 5095:
SEQUENCE CHARACTERISTICS:
LENGTH: 525 amino acids
TYPEL amino acid
TOPELOCY: linear
MOLECULE TYPE: protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

Sequence 64, Application US/10508263

Sequence 64, Application US/10508263

Publication No. US200520260754A1

GENERAL INFORMATION:

APPLICANT: BASF Plant Science GmbH

TITLE OF INVENTION: Constructs and methods for regulating gene expression FILLE REFERENCE: 53262-20085.00

CURRENT APPLICATION NUMBER: US/10/508,263

CURRENT FILING DATE: 2004-09-20

NUMBER OF SEQ ID NOS: 126

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 64

Sequence 10, Application US/2050260754A1

Publication No. US20050260754A1

GENERAL INFORMATION:

APPLICANT: BASF Plant Science GmbH

TITLE OF INVENTION: Constructs and methods for regulating gene expression

FILE REFERENCE: 53262-20085.00

CURRENT APPLICATION NUMBER: US/10/508,263

CURRENT FILING DATE: 2004-09-20

SOFTWARE: Patentin Ver. 2.1

Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

Claim 11; Page 10; 49pp; English.

The present sequence is that of a peptide comprising amino acid residues 52-71 of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SK32 ADD93649. The peptide binds to a major histocompatibility complex (MHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was used to search the primary amino acid sequence of GbpB for known MHC class II binding motifs. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides covalently linked with peptide subunits (preferably from the catalytic domain) of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
prepared synthetically or by recombinant DNA technology. Antibodies raised against MTC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                               protein-B (GDDB) of Streptococcus mutans strain SK32. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 30F4. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. Invention provides immunogenic compositions and vaccines for dental
Streptococcus mutans glucan binding protein-B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 5; Page 8; 49pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein-B (GbpB) of Streptococcus mutans strain 5SM3. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The includes a number of mumunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiphtopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GDpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multieptupic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental cartes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunogenicity; immune stimulation; glucan binding protein-B;

The present invention relates to a computational method (M1) for identifying adhesin and adhesin-like proteins, by computing the sequence-based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network (ANN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins an adhesin and adhesin-like proteins, having 274 fully defined 162-encoding adhesin and adhesin-like proteins, having 274 fully defined 62-encoding adhesin and adhesin-like proteins, having 105 hypothetical genes encoding adhesin and adhesin-like proteins, having 105 hypothetical genes encoding adhesin and adhesin-like proteins, having 105 hypothetical adhesin-like proteins, having 105 fully defined 53-3716 base pair (SEQ ID NO: 12-279); a set of 105 hypothetical adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 12-279); a set of 105 hypothetical adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (I) based on (M1). (M1) is useful for identifying and short-liking proteins of therapeutic potential. And identifying and short-liking proteins for further testing in development of new vaccine formulations to eliminate diseases caused by various pathogenic organisms. (M1) is capanisms, and from bacteria belonging to a wide chitantly related organisms, and from bacteria belonging to a wide chitantly related organisms, and from bacteria belonging to a wide chitantly related organisms, and from bacteria belonging to a wide chitantly related organisms, and from bacteria belonging to a wide contains. The present sequence is a microbial pathogen adhesin
Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    algorithm, adhesin; pharmaceutical; vaccine; drug screening; bordetella pertuesis infection; antibacterial; pneumonia; antiinflammatory; respiratory-gen.; gastric ulcer; antiulcer; gastrointestinal-gen.; urinary tract infection; antimicrobial; uropathic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                         New composition comprising a fragment of a glucan binding protein-B (dpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental carles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present sequence is the protein sequence of the glucan binding protein—B (GDpB) of Streptococcus mutans strain 15JP2. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GDpB peptides, especially HLA-binding peptides, covalently linked with peptides subunits of a glucosyltransferase. The antibods in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GDpB can be used in
                Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 3SN1. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, Claim 5; Page 8; 49pp; English.

ö The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention. New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MfC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental cartes. ```
The present sequence is that of a peptide comprising amino acid residues 48-67 of the glucan binding protein-B (GbpB) of Streptococcus mutans carrain SK32 ADD93649. The peptide binds to a major histocompatibility complex (MHC) class II protein. It was identified as a potential B cell septice used to search the primary amino acid sequence of GbpB for known MHC class II binding motifs. The peptide can be used in immunoganic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides covalently linked with peptide subunits (preferably from the catalytic domain) of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Displication of mantibody in a mammal. Displication of mantibody in a mammal. Displication of prepared synthetically or by recombinant DNA technology. Antibodies can be prepared against MHC class II binding fragments of GbpB can be used in
                                                                                                                                                                                                                                                                                                                         Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New composition comprising a fragment of a glucan binding protein-B dibbB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          79.8%; Score 75; DB 9; Length 20; 100.0%; Pred. i Sequence 4374, Application US/09583110

i Patent No. 6699703

i GRNERAL INFORMATION:

i APPLICANT: Lynn Doucette-Stamm et al.

i TITLE OF INVENTION: Nucleic Acid and Amino Acid Sequences Relating to Streptococcus

i TITLE OF INVENTION: Preumoniae for Diagnostics and Therapeutics

i TITLE OF INVENTION: Preumoniae for Diagnostics and Therapeutics

i TITLE OF INVENTION: Preumoniae for Diagnostics and Therapeutics

i TITLE OF INVENTION: NUMBER: US/09/583,110

i CURRENT APPLICATION NUMBER: US 60/05.26

i PRIOR PILING DATE: 1998-06-30

i PRIOR PILING DATE: 1998-06-12

i PRIOR PILING DATE: 1998-05-12

i PRIOR FILING DATE: 1998-05-12

i RUMBER: OF SEQ ID NOS: 5322

i LENGTH: 392

Patent No. 5866405
GENERAL INFORMATION:
APPLICANT: Choi, Gil Ho
APPLICANT: Nues, Donald Lee
TITLE OF INVENTION: Genetically Engineered Transmissible
TITLE OF INVENTION: Hypovirulence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER: POLYM:
